ADITYA PRATAP SINGH

FULL-STACK DEVELOPER · INDEPENDENT PRODUCT BUILDER

Greater Noida, Uttar Pradesh, India | +91 7068003894 | singhaditya40@gmail.com | LinkedIn | GitHub

CURRENTLY BUILDING: *Ytauto AI's cloud migration (Turso + Prisma) is active · TutorMitra is on hold · strengthening core basics (DSA, backend fundamentals) alongside React*

PROFILE

Computer Science Engineering student who learns by building real things instead of just following tutorials. I design the features, plan how the pieces fit together, and use AI tools as part of my workflow to write and debug code faster - the same way any developer today uses modern tooling. That combination has let me take four different projects from idea to a live, working product on my own: setting up the database, wiring up the backend, building the UI, and fixing the real bugs that only show up after deployment. I'm still early in learning the deeper fundamentals - DSA, system design - and building real projects is how I'm closing that gap, one piece at a time.

SKILLS

- **Languages:** JavaScript, TypeScript, HTML5, CSS3
- **Frontend:** React.js, Next.js, Tailwind CSS
- **Backend:** Node.js, Express.js, REST APIs
- **Database:** PostgreSQL, MongoDB, Drizzle ORM, Prisma, Firestore, Turso
- **Mobile:** Capacitor (Android)
- **Tools & Platforms:** Git, GitHub, Vercel, Render, Razorpay API, Docker

PROJECTS

SkillSwap — Peer-to-Peer Skill Exchange Platform *Live: skillswap-india.vercel.app*

React, TypeScript, Vite, Express.js, Drizzle ORM, Neon PostgreSQL, Razorpay, Capacitor (Android), Vercel, Render

- Built a full-stack marketplace where users exchange skills using a credit-based system with a dual-confirmation flow for session completion.
- Built a full admin panel - dashboard, analytics, search, and user management - plus real-time notifications for matches, messages, and booking updates.
- Integrated Razorpay payments and shipped a native Android app via Capacitor.
- Debugged production issues in the wild: oversized API payloads, broken relative API URLs inside the Android WebView, and a cron job failing due to internal networking config.

Ytauto AI — YouTube/Instagram Content Automation Tool (In Progress) *GitHub · youtubeauto-ai.onrender.com*

Next.js, Node.js, Prisma, Turso (SQLite), AI video/image generation APIs, Render

- Built a render pipeline combining typography-based videos, AI-generated visuals (Kling AI, Pollinations AI), and stock footage into finished short-form content.
- Migrated authentication from client-side localStorage to a cloud-backed Turso + Prisma system for persistence across devices.
- Debugged storage-path and encoding issues in the render pipeline; deployed as a Docker web service on Render.

TutorMitra — Tutoring & Mentorship Platform (On Hold)

React, TypeScript, Node.js, Express, MongoDB, Socket.io

- Built a real-time tutor-student matching platform with live messaging via Socket.io.
- Led a dead-code audit that removed duplicate API clients and auth systems, and fixed backend/frontend response-shape mismatches.

OTHER PROJECTS

Nira — Real-Time Voice AI Assistant (Local build — not publicly hosted)

React, TypeScript, Vite, Web Speech API, Gemini API

- Built a browser-based voice assistant with live speech recognition and text-to-speech; solved mic/voice conflicts across browsers.
- Kept as a local build since it needs a paid API key, which can't be safely exposed in a public deployment.

Dev Internship Platform

Firebase, Firestore, EmailJS, JavaScript

- Built a Firebase-hosted internship portal with a password-gated admin panel and an admin-triggered email flow using EmailJS + Firestore.

Netflix & Myntra UI Clones (Practice Projects)

HTML5, CSS3, JavaScript

- Rebuilt the Netflix landing/browse UI and a functional Myntra clone (product listing, cart, and interactions working) from scratch in vanilla JS/HTML/CSS - early foundational projects before moving into React.

ACHIEVEMENTS

- Winner, college-level hackathon; active tech-fest participant.
- Designed, built, and deployed 4 full-stack projects solo - each with a real database, working backend, and live hosting.
- Shipped a working Android app (SkillSwap) using Capacitor, including debugging real WebView-specific issues.
- Integrated a live payment system (Razorpay) with escrow-style dual confirmation to prevent fraud.
- Active on GitHub with consistent commit history across all project repos.

EDUCATION

KCC Institute of Technology & Management, Noida*Expected Graduation: 2027*

B.Tech, Computer Science Engineering | CGPA: 7.0/10

Coursework: DSA, DBMS, OS, Computer Networks, Software Engineering

More projects and experiments on GitHub.
